Vaughan's FAMOUS RAINBOW Garden of Gladioli

FIFTY Flowering size bulbs, ten each of the five outstanding varieties illustrated on this page. Each variety separately bagged and labeled. Prepaid 600 miles for **\$2.00**

WITH Victory accomplished we are eager to return to the ways of peace but it will be some time before the flowers in our gardens can be restored to prewar abundance.

Reconversion of the thousands of acres which war caused to be diverted from growing flowering plants, seeds and bulbs, to the production of food, will take more time, even, than the change-over of manufacturing plants from building tanks to pleasure cars.

In the face of scarcities, the demand for flowers is huge; and this increased the difficulties we have met in providing bulbs for our Rainbow Garden of gladioli which for so many years we have maintained, as the best gladiolus value available to American home gardeners.

In spite of all this we make no increase in the price of our Rainbow Garden collection, over last year, and the quality in our opinion is improved.

This year's collection is the best value we have ever offered. It may be impossible to match it for many years; and the bulbs which you will harvest, after you have enjoyed the flowers, should show a substantial profit on your investment.

The scarcity of seeds, bulbs and plants of all ornamentals in the face of unprecedented demand has caused a flood of substandard material to be offered, but not by us. We maintain the quality upon which our customers have depended for seventy years. It will be found that lower prices obtained by the sacrifice of quality will be more costly in the end.

Bulbs used in our Rainbow Garden of Gladiolus, this

year as in the past, are not first size, but they are of flowering size, and the kind we use in growing exhibition flowers. They take a little longer to bloom than larger bulbs may, but the size and quality of the flowers and the crop of bulbs produced for next year's planting, are equal to the products of the largest bulbs.

This year we offer 50 bulbs, 10 each of the following 5 varieties, prepaid to 600 miles of Chicago, Ill.

Beacon. Tall, giant flowered salmon-scarlet, one of the largest of all. As the illustration shows its magnificent spikes will show ten florets fully open before the bottom floret

fades, giving a stunning plume of color.

Dr. F. E. Bennett. Vigorous grower of largest size, bearing well-formed spike of scarlet florets, with faint white markings in throat. A consistent ribbon winner.

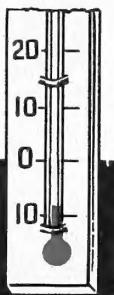

Maid of Orleans. This milky white variety, with cream throat, was bred by Pfister, and has the enormous florets which characterize his creations. It is one of the finest of the new whites.

Minuet. Giant flower of true orchid coloring, which has held first rank in its color class for years and is still unsurpassed. Its tall spike has florets perfectly placed, and it is always a vigorous grower.

Picardy. No collection would be complete without Picardy, which is still undisputed champion of all. Supreme in its delicate coloring of apricot pink, it is also a giant in size, and a model in form with its perfectly placed florets, of which ten open before the first fades.

Everblooming Hybrid Tea Rose
Collection 1C

These are Roses selected by the Rose Council after two-year tests in 18 Official All America Rose Selection test gardens. Only a rose that gives good results in all parts of the country can pass their rigid tests.

GRAND DUCHESS CHARLOTTE (AARS 1943). (Patent Applied For). Truly an aristocrat providing a shade of red never before seen in the rose world. The long streamlined buds of magnificent Morocco-red open to firm-petaled blooms of dusky coral-red which do not fade but gradually merge to a lovely coral-pink. \$1.65; 3 for \$4.50.

HEART'S DESIRE (AARS 1942). (Patent 501). Here is a rose that has everything. Color, a pure even shade of luminous red which does not blue or burn, even in the hottest weather. A small vase of flowers will perfume a whole room. It has rich foliage and produces quantities of flowers on long cutting stems all season. It has vigor, being a strong grower like Radiance and Crimson Glory, its parents. \$1.65; 3 for \$4.50.

MME. CHIANG KAI-SHEK. "The First Lady of China." (AARS 1944). (Pat Applied For). "The honor rose for 1944." It has long, pointed buds of light yellow which open full to beautifully formed, creamy yellow, long stemmed flowers over dark green, disease resistant foliage. \$2.00; 3 for \$5.00.

ROSE
POINSETTIA

ALL these Roses will bloom in your garden this summer. Plant according to simple directions furnished with the plants. Before winter comes they should have borne for you hundreds of lovely blossoms, beginning in June and continuing without interruption until killing frosts. Our plants are finest two year budded plants that are produced. The varieties are of the newest type, some of the very latest to make their debuts. Plant dormant Rose bushes as soon as the soil thaws and dries out enough to be prepared properly. As soon as dormant Roses are properly pruned and planted, hill them up with 3 or 4 inches of moist soil. This keeps the wind from drying the plants and helps them to leaf out more quickly. Remove the soil gradually as the plants begin to grow.

One Each of These Five Varieties Value \$7.05 for \$6.50, by Express (Collection 1A)

First step toward correcting neglect due to war should begin with the lawn. If yours has suffered during the busy years just passed, repair it this spring. Without reseeding, feeding and good care a lawn quickly suffers; and the longer it goes without proper attention, the more difficult it is to repair.

Well advised lawn makers will avoid sowing the cheap mixtures which flood the market adulterated with quick show grasses such as timothy, a hay seed whose coarse stems ruin the lawn. Buy only seed on the quality of which you can depend.

The basis of VAUGHAN'S "CHICAGO PARKS" lawn seed is a large amount of the finest Kentucky blue grass, which is combined with other suitable grasses in the proper proportions to produce a fine permanent turf. Needless to say, it does not contain timothy, which is a hay grass and does not belong in a lawn; none of Vaughan's formulas include this unsuitable grass.

Price, 1/2 lb., 45c; 1 lb., 75c; 2 lbs., \$1.50; 3 lbs., \$2.20; 5 lbs., \$3.60; 10 lbs., \$7.00; 15 lbs., \$10.40; 20 lbs., \$13.75; 25 lbs., \$17.00; 100 lbs., \$64.00.

We offer this mixture without clover under the name "Vaughan's Fairway Formula"—Prices same as "Chicago Parks."

Vaughan's Special Purpose Mixtures

We recommend our lawn mixtures, composed of suitable varieties of grass seed, because results are more satisfactory from a correct combination of grasses than from a variety sown alone. Our grass seed division has long been known as an authority on growing fine turf, and for the guidance of our customers we send our booklet on lawn-making upon request and without charge. A copy of this booklet is enclosed in every carton and bag of Vaughan's lawn seed mixtures.

For Your Protection—Always remember that we neither buy nor sell seeds that are not tested in our own officially recognized laboratory for purity, germination, identity and freedom from weeds.

Vaughan's "Columbian" Formula for Shady Lawns or Sandy Soil

In making a lawn on sandy soil or in partial shade, conditions are met which require the use of a special grass seed blend. Vaughan's "Columbian" is the correct blend for such locations.

Vaughan's Dense Shade Formula (Containing Creeping Red Fescue)

An exceptional formula which is particularly adapted to heavily shaded areas and will also do well in lighter shade. We have spared no care or expense to make this lawn seed the best obtainable for the purpose. Follow instructions in our lawn booklet for growing grass in the shade. Does not contain clover.

Price, 1/2 lb., 55c; 1 lb., 90c; 2 lbs., \$1.80; 3 lbs., \$2.65; 5 lbs., \$4.35; 10 lbs., \$8.50; 15 lbs., \$12.65; 20 lbs., \$16.75; 25 lbs., \$20.75; 100 lbs., \$79.00.

Quantity to Use—On new lawns, use 1 lb. for every 300 square feet; 5 lbs. for 1500 square feet; 135 to 150 lbs. for one acre. To replenish lawns where turf is thin, use half quantity.

VAUGHAN'S No. 25 LAWN FORMULA

An economy blend for new seedings and quick results which should be followed by reseeding with a more permanent blend like our "Chicago Parks." In spite of its low price, this blend does not contain timothy. Sow at the rate of 1 lb. to every 200 sq. ft. Begin cutting when grass is 3 to 4 inches high and continue to cut regularly to keep turf fine. Price, 1 lb., 50c; 2 lbs., \$1.00; 3 lbs., \$1.45; 5 lbs., \$2.35; 10 lbs., \$4.50; 15 lbs., \$6.60; 20 lbs., \$8.75; 25 lbs., \$10.75; 100 lbs., \$39.00.

Vaughan's "Private Estate" Bent Formula FOR LAWNS "DE LUXE"

This formula contains over 98% pure seed and is free of all noxious weeds. In addition to Kentucky Blue Grass of the highest quality, to insure a durable and resistant foundation for your lawn, it includes an important proportion of Certified Bent. It produces a heavy turf of very fine texture.

This mixture is equal or better in purity to the highest priced mixtures on the market and most important, contains more bent seed. It is the best value on the market.

Bent grasses are increasingly popular for lawns, especially in cities where lawns are small in area and extra care is not burdensome.

Seed at the rate of 3 to 4 lbs. per 1,000 sq. ft.

ASTORIA BENT. Astoria Bent is identified by its numerous rootstocks which spread underground and throw up new shoots, making a very thick turf, and by the presence of runners above ground in the early stages of development. This Bent has a good color and is excellent as both a lawn and putting green grass. It does not require as much cutting as Creeping Bent. We highly recommend this type.

SEASIDE BENT. This is a true unmixed Creeping Bent grass seed which spreads by surface runners instead of by the underground root stalks which characterize the Astoria Bent.

Hybrid Sweet Corn Team

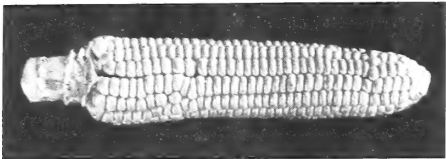

Plant the four varieties illustrated below at the same time to produce an all season harvest of highest yield and quality. 2 oz., of each variety in separate packets, totaling $\frac{1}{2}$ pound,..... **45c**

To produce an all season and heavy yielding harvest of the highest quality, we recommend that these four varieties which vary in season from 64 to 90 days, be planted at the same time. Later varieties will give a longer harvest and heavier yield than the earlier, and the four together will provide sweet corn all summer.

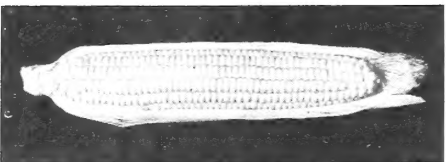

These varieties were chosen on the basis of tests in our trial garden, in order to give the longest season of harvest, coupled with the highest quality and yield. We believe this combination an improvement over last year's.

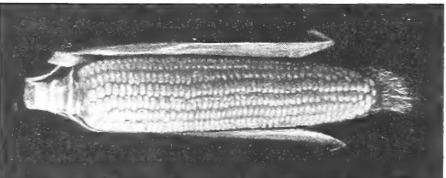

Hybrid Sweet Corn Surprise. You'll be surprised when these 12 row ears are ready to eat 64 days from planting, surprised by its sweetness and abundance. Pkt., 15c; $\frac{1}{2}$ lb., 35c; lb., 60c; 2 lbs., \$1.10.

Hybrid Sweet Corn Marcross 39. 75 days. It follows Surprise, with even sweeter flavor and larger ears, produced in greater abundance. Pkt., 15c; $\frac{1}{2}$ lb., 35c; lb., 60c. 2 lbs., \$1.10.

Hybrid Sweet Corn Golden Cross. 79 days. It comes the nearest of any hybrid to Golden Bantam quality, with more and larger ears. Pkt., 15c; $\frac{1}{2}$ lb., 35c; lb., 60c; 2 lbs., \$1.10.

Hybrid Sweet Corn Wilson. 90 days. Finest late variety in yield and flavor. Large 16 to 20 row ears, with fine golden grains, borne in abundance. Excellent for canning. Pkt., 15c; $\frac{1}{2}$ lb., 35c; 1 lb., 65c; 2 lbs., \$1.20.

Newer Vegetables

One Inch More of the Best Home Garden Bean

Green Pod Bush Bean Long green. 52 days. This is an improvement on the variety Tendergreen, resembling it in all respects except that the pods average an inch longer. Like Tendergreen its pods are round, full of flesh completely stringless and free from fibre, in short, it has everything which made Tendergreen the unquestioned leader in quality for the home garden. And besides the longer pods, the plant grows larger and bears a heavier crop. That extra inch on the pods is most important, not only for the additional food it yields, but because of the blue ribbons you pods can win at the annual harvest show. No question but that the judges, all other things being equal, will award the first prize to the bean pods that are longest. Pkt., 15c; $\frac{1}{2}$ lb., 30c; lb., 50c; 2 lbs., 95c.

Biggest, Earliest, Best Yielding Bush Lima

Lima Bean Early Market. 73 days. Plant breeders are making great progress in developing early bush lima beans which bear the large seed characteristic of Fordhook, yet rival the small-seeded Henderson type in yield and earliness. There has been a race between several strains, and on the basis of our tests we are awarding first prize to Early Market. It is only three days later than Henderson, but its seed is three times as large, and the illustration shows how heavily it bears. When ready for harvest its seed has a uniform green coat which makes it an excellent variety for freezing or canning. It has many points of superiority over Fordhook 242, listed on Page 61. Pkt., 15c; $\frac{1}{2}$ lb., 30c; lb., 50c; 2 lbs., 90c.

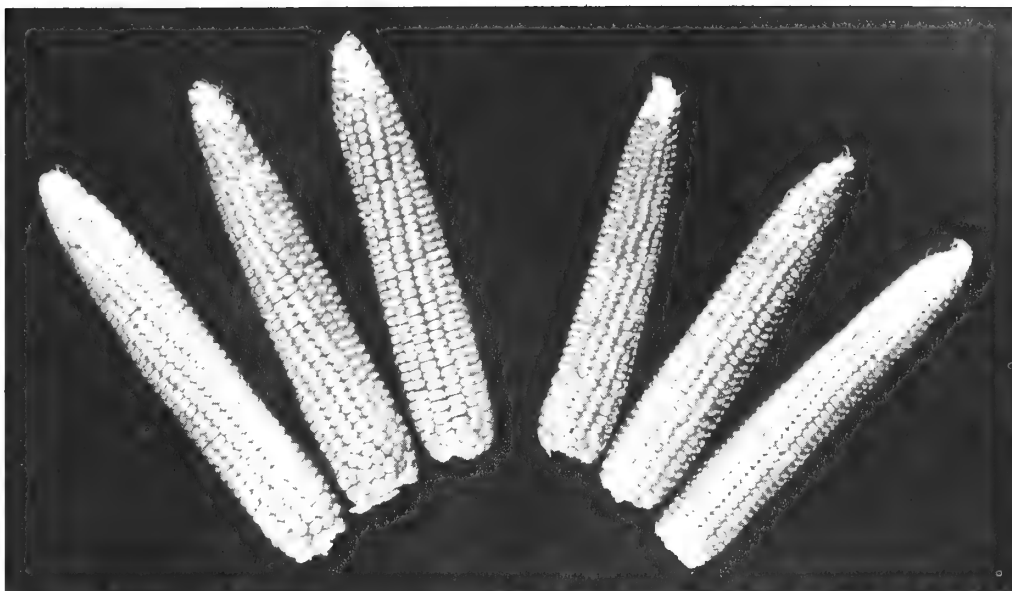

Compare These Pop-corns

Much has been printed about new hybrid popcorns. The best of those tested in our trials last summer is shown in the three ears on the left of the illustration. It is Prof. Glenn Smith's production, known as Purdue Hybrid 38, also as South American hybrid. The three ears on the right are open pollinated South American.

South American Hybrid (Purdue Hybrid 38). 110 days. The introducers say this, like hybrid field corn, bears more heavily than open pollinated varieties, and gives a larger volume of popped corn. Stalks in our trials grew six feet tall, and 60% of them had two ears to the stalk. Ears have twelve to fourteen rows of rounded deep yellow kernels. Pkt., 25c; $\frac{1}{2}$ lb., \$1; lb., \$2.

South American (Open Pollinated). 110 days. Widely popular for its heavy yield, and the quality of the popped corn, which is exceptionally large and free from hard centers. It usually bears two ears to a stalk, seven inches long, with 12 to 14 rows of rounded kernels. Pkt., 10c; $\frac{1}{2}$ lb., 20c; lb., 35c; 5 lbs., \$1.25.

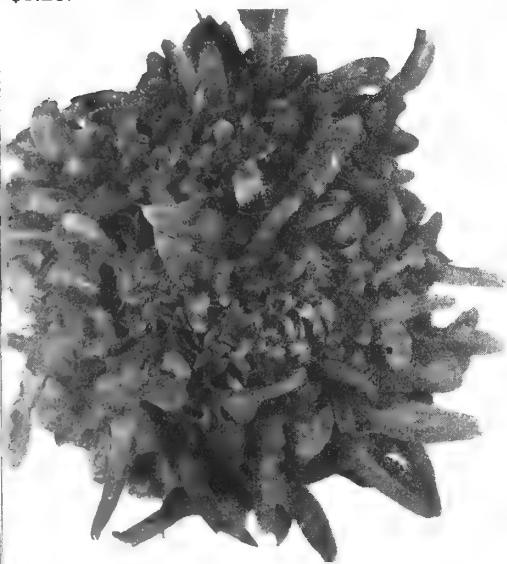

New Carrot Tops All

Carrot Sweetheart. 70 days. The French have a flare for carrots; and until now the variety Touchon, which may be described as a longer Nantes Half Long, was the quality leader in this country. But in Sweetheart, Touchon has been surpassed; here there may be a core, but it is invisible, the deep orange coloring extending through all the flesh. It has the blunt-end, slender cylinder shape, averaging $1\frac{1}{2}$ by 6 inches, and is tender, brittle, and exceptionally sweet. For all home gardeners who like Touchon, we recommend this as an improvement. Pkt., 25c; $\frac{1}{2}$ oz., 45c; oz., 75c; $\frac{1}{4}$ lb., \$2.

Best Heading Variety

Lettuce Bibb (Limestone). 57 days. Wherever home gardeners meet to talk shop, you can get an argument between those who think Oak Leaf is the best home garden lettuce, and those who favor Bibb. Why not grow both? Certainly there can be no doubt that of all varieties listed as head lettuce, the loose, dark green heads of Bibb are favorites with the chefs of luxury hotels and restaurants. In the garden it grows fast in the spring and fall, maturing its loose heads, as big as a fist, from seed sown in the open ground, with reasonable thinning. In hot weather it runs quickly to seed, so start it early and sow a fall crop in midsummer. Pkt., 20c; $\frac{1}{2}$ oz., 30c; oz., 50c.

Our Country's No. 1 Leaf Lettuce

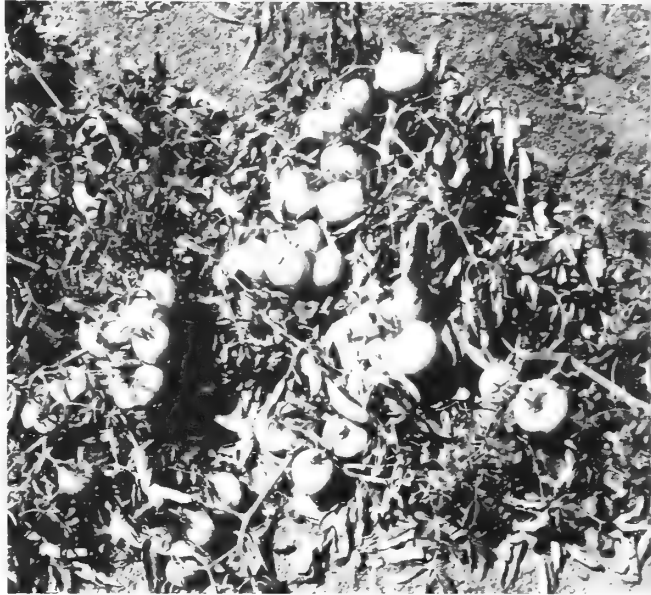

Lettuce Oak Leaf. 40 days. Though called a leaf lettuce, it makes a rosette of leaves almost as much of a head as that of Bibb. And you never know Oak Leaf's true quality until you thin out the plants to stand six inches apart and let the remaining ones mature. The base of each leaf turns crisp and cream colored, and the tenderness of the leaves unequalled by any other. Pkt., 20c; $\frac{1}{2}$ oz., 40c; oz., 70c.

BIBB LETTUCE, CROSS SECTION

For Big Tomatoes and Lots of Them

Tomato Giant Tree. 90 days. Are you one of the numerous gardeners who get a thrill out of growing two-pound tomatoes? There's an army like you, who are looking for this prize, a big tomato that is heavy yielding. It's "potato leaved" and has heavy stems and such amazing vigor that when staked and pruned, the way it does best, it should be spaced close together to restrain the heavy vine. Grown unpruned and heavily fed it will cover a grape arbor with dense growth and many, many huge fruits of high table quality. Greenhouse men are beginning to grow it. Of course not every fruit is a two pounder, but some are heavier, and the average is close to a pound, pink in color, and far smoother than most other big ones. Pkt. 50c; $\frac{1}{4}$ oz. 90c; $\frac{1}{2}$ oz. \$1.65; oz. \$3.

A Quick and Heavy Producer

Tomato Early Chatham. 60 days. Small vine tomatoes, of which this is one, stop growing stems when a heavy crop of fruit is set and devote all their energy toward ripening the crop. They were developed in northern states, where late varieties are caught by frost with most of their fruit unripened. Value for the home garden is not only in quick maturity, but in the limited space which small vine growth requires. Never prune, or stake them. Michigan breeders developed this, and find it does better than Bounty in the short season of the upper peninsula. Both are good, and Bounty will be found on Page 79. Pkt. 15c; $\frac{1}{2}$ oz. 50c; oz. 90c.

Quality Climbing Cucumber

Cucumber Mandarin. 45 days. In amazing speed of growth, slender length and quality, this cucumber has no rival for the home garden. Even the smallest vegetable plot can produce it in abundance without sacrificing ground space, by letting the vines climb a trellis or fence. Two plantings, twenty days apart, will furnish the table with salad cucumbers all summer. Even the 12-inch long fruits need no special support when the vines climb. Pkt., 10c; oz., 35c; $\frac{1}{4}$ lb., \$1.00; lb., \$3.00.

How to Grow Giant Onions

Onion Valencia Sweet Spanish. Utah strain. 110 days. The fruit illustrated was grown from seed in the Chicago area last summer by following this simple method: Sow seed in a flat, in hot-bed or greenhouse, about March 1. If seed are sown thinly the plants need not be thinned out, and will grow with small attention until the frost-proof date in your neighborhood, when they can be transplanted to the garden. Drop plants in holes made by a dibber 4 inches apart. Onions need rich soil and abundant water. Two-pound plants exhibition specimens can be grown with wider spacing and frequent feeding. Fast growing produces the mildest, sweetest onions. White or yellow (specify color desired). Pkt., 15c; $\frac{1}{2}$ oz., 40c; oz., 75c; $\frac{1}{4}$ lb. \$2.25.

New Flowers and Specialties

3983 PETUNIA Bright Eyes. Pkt., 25c

Gay Pink and White Petunia

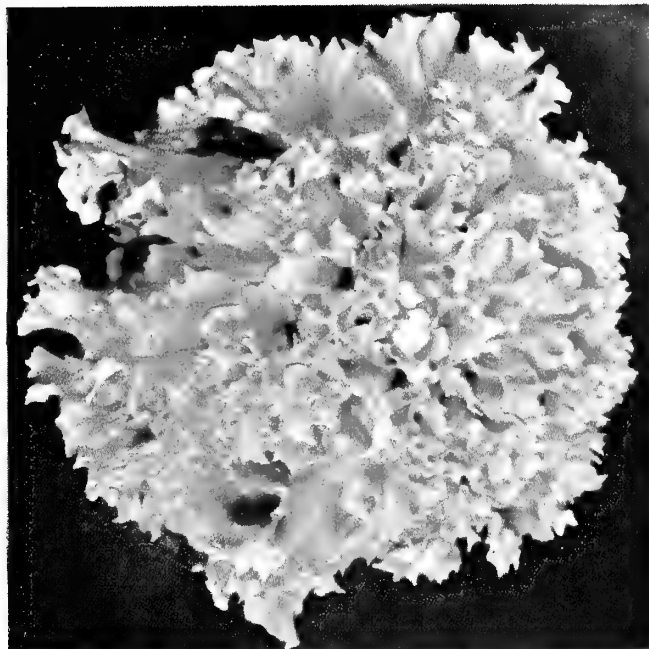

3983 PETUNIA Bright Eyes, which was awarded a Bronze Medal, presents a lively picture, growing but 9 inches tall in a compact mound completely covered with small $1\frac{1}{2}$ inch flowers of soft pink, with white throat. It is a smaller, more compact Rosy Morn, more profuse in flowering. It is not a strong grower and needs good treatment. Pkt., 25c.

2231 DIANTHUS Westwood Beauty. Pkt., 25c.

Dark Dianthus Beauty

2231 Dianthus Westwood Beauty. Secured Honorable Mention. It is really a large flowered hybrid of D. Heddewigii and Chinensis. Grows 15 in. and has the largest flowers of any of the Chinese Pinks. The color varies between deep crimson and velvety red, the lacinated flowers being carried on long, wiry stems. 25c.

3949 PETUNIA All Double Colossal Shades of Rose. Pkt., (100 seeds). \$1.00.

1946 All America Winners

ALL varieties on this page won awards in the All America trials, in which new creations are tested for merit in trial gardens located in many sections of our country. Thus awards are based upon excellence demonstrated under varying conditions of soil and climate.

Wilt Resistant Asters

Culture: A, B, D or E, Page 58

Good news for all who have had trouble growing asters, is that D.D.T. Dust, the new insecticide, will kill leaf hoppers, which transmit the yellows disease, for which there has hitherto been no reliable treatment. Occasional spraying or dusting with this lasting insecticide should protect your asters from infection, which is the chief enemy of these beautiful flowers in sections where the wilt disease is not established in the soil. Wilt resistant varieties are resistant only to wilt, but in general are more vigorous, and less susceptible to other infections. Whenever a variety can be offered in a wilt resistant strain, we omit its non-resistant counterpart from the list.

SOWING FINE FLOWER SEEDS

One garden enthusiast mixes her fine seeds, such as Petunia, Poppy, etc., with ten times their bulk of dry sand, puts them into a salt shaker and sifts them over the beds or borders firming them with a board. A very practical idea. Try it!

Concord, Nebr., February 9, 1945
"All your seeds and plants are of the finest quality. I had a lot of fun last year with Fluffy Ruffles Petunia seed. Every plant I raised (and I raised a lot of them from that package of seed) was so gorgeous they raised oh's and ah's from every onlooker. I took prizes with them and enjoyed them all summer then selected six, a hard job too, and brought them in the house last fall. They have been blooming all winter." Mrs. G. C.

Scarlet Runner beans serve a double purpose—they provide both flowers and food. Some persons do not realize that these beans are good to eat, yet in England they are grown by the acre by market gardeners for their city trade. This will make them throw out additional trusses of bloom and, of course, increase the number of beans. Pkt. 10c.

It is fascinating to grow your own perennials from seed. We recommend sowing perennial seeds in spring. Seed germinates better in the cool weather than in the heat of mid-summer, and the long growing season produces larger plants that winter over more successfully. The majority of these perennials bloom the second year from seed, although some, like *Coreopsis* and *Gaillardia*, if sown early, bloom the first year. Plants can be raised in beds and transplanted, or the seed may be planted directly in your perennial garden. The great charm of perennials lies in their permanence; once established they are a constant source of pleasure. Items preceded by X are rock garden subjects.

Lower growing types are also valuable for both border and cut flower use; the Chinese and Butterfly types are fine for bedding.

NOTE—A teaspoonful of sugar in the water will delay shattering of cut Delphiniums two or three days. To aid the Delphinium plants to live relatively long is to see that the plants are well watered after blooming.

SOWING THE SEED

COVERING THE SEED

FLOWER SEED CULTURES—HOW TO SOW

IN FIVE paragraphs below, designated A, B, C, D and E, we cover in considerable detail the methods of starting flower seeds which are available to the amateur without a greenhouse, and which cover well the needs of an outdoor garden. In the flower seed section in the case of each flower listed, information is given as to the cultural methods which can be used for that subject.

A Sow in the bed, border or row where the plants are to grow. The soil should be loamy, with well pulverized surface. With heavy soil inclined to cake and crack, it is usually best to grow plants in a seed bed (B) and transplant to the permanent place. Loosen the soil where seeds are to be sown, with the trowel, or hoe, several inches deep. Rake smooth. Broadcast small seeds and cover them lightly four or five times their diameter. Very small seeds may be merely pressed in. Larger seeds may be planted singly, well covered, but more thickly than plants are wanted. Firm the soil well over the seed. Watering now becomes of great importance. At no time should the soil be allowed to become hard and dry, yet excessive watering may cause the seeds to rot, sour the soil, or cause "damping off." When the plants appear, thin them out, allowing each to grow singly, without crowding. The distance between them is governed by their ultimate size and spread. Excess plants may usually be moved to a new location.

B Sow in outdoor seed bed, to be transplanted. The seed bed in the open should be of loose, mellow loam, raised slightly above the surrounding surface, and preferably surrounded by a wooden curb, to prevent rain washing across it. It should not be wider than four feet, so it can be worked easily. Shelter from high winds is valuable, but damp and shady corners are not desirable. Full sun is advisable when seedlings are up, while shade when needed, as in mid-summer for perennial seedlings, is best supplied by a lath or cloth canopy, which can be removed in damp and cloudy weather. Sow the seeds in rows which may be as close as five inches. Sowing and watering are the same as described in "A" above. Seedlings may be transplanted when they make true leaves, the second pair of leaves to appear; or they may be left until larger before being moved to their permanent location. Perennials should be moved from the seed bed to a nursery row, to grow until fall before being moved to the border.

C Sow in flat, pot or pan outdoors or in a cold frame. This method is applicable to slow germinating subjects, some of which may take a year to germinate. Fill the receptacle with potting soil as described in "D," firm the soil and broadcast the seed, covering four or five times their diameter. Place the receptacle in a shaded location, where there is free air circulation. During the spring, summer and fall, water often enough to prevent soil from drying out.

While our cultural instructions are definite, detailed and exceptionally thorough, they should be supplemented by reading in good gardening books and by obtaining, at first hand, advice from successful gardeners in your neighborhood. Success in gardening requires study, and the opportunity for enlarging one's information and trying out new things is one of the most fascinating features of gardening.

A mulch of peat moss will help retain moisture. In winter, place in a protected place outdoors and cover with leaves. Have patience with slow germinating subjects; do not disturb too quickly. Any live seed will eventually grow if given time enough, provided soil, moisture supply, etc., are right. When seedlings appear and make true leaves, transplant to pots, nursery row or permanent location. If moss forms on soil surface, sprinkle fresh earth over top.

D Sow indoors in a box, pot or pan. This method may be followed where there is a window facing south, enjoying sunlight most of the day. Use a standard florists' pot or pan (shallow pot) or a "flat," which is a shallow box, with holes bored in the bottom for drainage. Cover the drainage holes in pot or box with broken pottery; fill with potting soil. This is a mixture of half sand and half black loam. It may be obtained from florists. Firm the soil, and sow the seeds in rows, marking each row to identify the sowing. Water by setting the box or pot in water, so that it soaks up from below, or use a fine spray which does not wash the soil. Place in a dark place, covered with a wet newspaper blanket until the seeds sprout. As soon as sprouts appear bring into full light. Cover the box or pot with glass to check evaporation, but when moisture collects on glass wipe it off, and prop up one end of the glass to allow air to circulate during the sunny part of the day. A temperature not below 50 degrees at night, or 75 degrees by day, is best. Do not allow the soil to dry out. When the seedlings have made true leaves (the second set), they should be transplanted to other flats, giving at least two inches of space apart, or they may be moved to small pots or to an outdoor seed bed or border.

E Sow in a hotbed or cold frame. A cold frame or a hotbed heated by manure or other means may be used. The best method with flower seeds is to sow seeds in flats, which are placed in the frame. With manure heated beds, seeds should not be sown until the temperature of the newly made bed has dropped to 90 degrees. Watering and ventilation are important. On sunny spring days, always prop up one end of the sash to prevent overheating, which may occur quickly and cause spindly growth. Do not allow the soil to dry out. When the seedlings have made true leaves, they should be transplanted to other flats, spaced two inches apart each way; or to the soil in the hotbed, or to an outdoor location, if late enough.

Quality Perfumes

ALL AMERICAN

DURING the years of war scarcity, thousands of women who had used imported perfumes turned to Vaughan's True Floral fragrances and found them fully equal to the finest imported sorts in quality.

Even during this trying period we maintained our policy of aging all perfumes at least two years and all our perfumes and colognes were and are made with the traditional cologne spirits—we do not use isopropyl alcohol or other substitutes.

The quality of Vaughan's Natural Floral Perfumes is attested by the many women of prominence in society, on the stage, and radio, who regularly purchase our perfumes and colognes for their own use and for gifts to their friends. They have found in these perfumes a recreation of the fragrances they prefer, truer than was provided by the best imported perfumes.

We invite women of taste and discrimination to compare them directly with their favorite imports regardless of brand, price or name. Examine them critically. Then apply this final test—compare them with the freshly opened flower for which they are named—there can be no more difficult test than this.

To those who have used our floral fragrances, we recommend a trial of these fine French type bouquets—Bouquet S, Bouquet X, Hawaiian Lei, Zanzibar, Calcutta, Song of the Heart and Victoria Regina.

THE FOLLOWING ODORS ARE AVAILABLE IN EITHER COLOGNE OR PERFUME

Cologne is about one-eighth the strength of perfumes (about double the strength of ordinary toilet water).

Appleblossom: Soft, yet fresh and clean.

Bouquet S: A delicately feminine blend of rich floral oils that in France and America is accepted as the leading type of odor in the better shops.

Bouquet X: Another blend, slightly "drier" and less sweet. An exotic fragrance preferred by women accustomed to the better French perfumes.

Carnation: Many acknowledge it as the best recreation of this beloved old favorite.

Lily of the Valley: At last, a satisfactory reproduction of this elusive scent.

Parma Violet: The full richness of this famous old time luxury perfume.

Red Rose: The Damask Rose type.

Sweet Pea: The true fragrance of the original Spencer sweet pea.

Violet: The English violet, softer than the Parma type.

White Rose: This beloved fragrance is once more available.

Wild Rose: Like the breeze through a Sweet Briar hedge in June.

"Personalized Perfumes"

Cost of Perfume Federal Tax Included
Dram.....\$1.80 Ounce.....\$12.00

We take pleasure in offering this group of highly individual, specially blended odors, which while not exactly matching the perfume of particular flowers, do express the enchanting fragrance of gardens and woodlands.

Calcutta: The oil from which this perfume was made was intended originally for introduction at \$75.00 an ounce.

The fragrance is that of the rich, opulent bouquets for which the French are famous, yet it is so dry and woody that it is not cloying. Outstanding.

Victoria Regina: Based on the formula for the consecrated oil used in anointing Queen Victoria at her coronation. Rich and fragrant. Not for the ingenue.

Song of the Heart: Created as the personal perfume of the wife of one of America's leading perfumers, this is perhaps the most distinctive bouquet offered today.

While it is extraordinarily rich, at the same time it is so dry and woody that there is no feeling of cloying heaviness. It has had unusual acceptance from women of taste and discrimination. We recommend it without reservation.

BEETS

Eat Young Roots and Top

Right to Left, BEETS PERFECTED DETROIT, DETROIT DARK RED SELECT, GREEN TOP BUNCHING, CROSBY'S EGYPTIAN, EARLY WONDER, EARLY BLOOD TURNIP, EARLY FLAT EGYPTIAN.

QUANTITY in Beets is measured by an even, globular shape, uniformity in size, bright, even color, flavor, fine texture and tenderness. Here, as with all vegetables, the difference between a fine and a mediocre strain of one variety may be as great as between different varieties.

Our best seed is grown only from transplanted roots, which are taken up in the fall, carefully graded, stored over the winter and transplanted again in the spring. Only Beets which conform to the highest quality standards are planted for seed. Thus improvement is shown annually.

All beets keep well in winter when properly stored. A special sowing should be made in midsummer to produce the storage crop.

As soon as soil can be worked in the spring, sow one seed to the inch, in drill half-inch deep. Firm soil well over seed and water well if required. Thin when roots begin to make globes, to stand 4 inches apart in row. Cook discards with their tops.

Quantity needed to sow: 15 ft. row, 1 pkt.; 60 ft. row, 1 oz.; acre, 7 lbs. (Rows 18 in. apart).

***Perfected Detroit.** Matures in about 55 days. In this improved strain of Detroit Dark Red Turnip Beet the fine qualities which have made that variety standard for main crop sowing have been strengthened by careful breeding. The color inside and out is a very dark red, and flesh of fine texture, tender and of excellent flavor. Pkt., 15c; ½ oz., 25c; oz., 40c; ¼ lb., 95c.

Richest of All in Vitamins

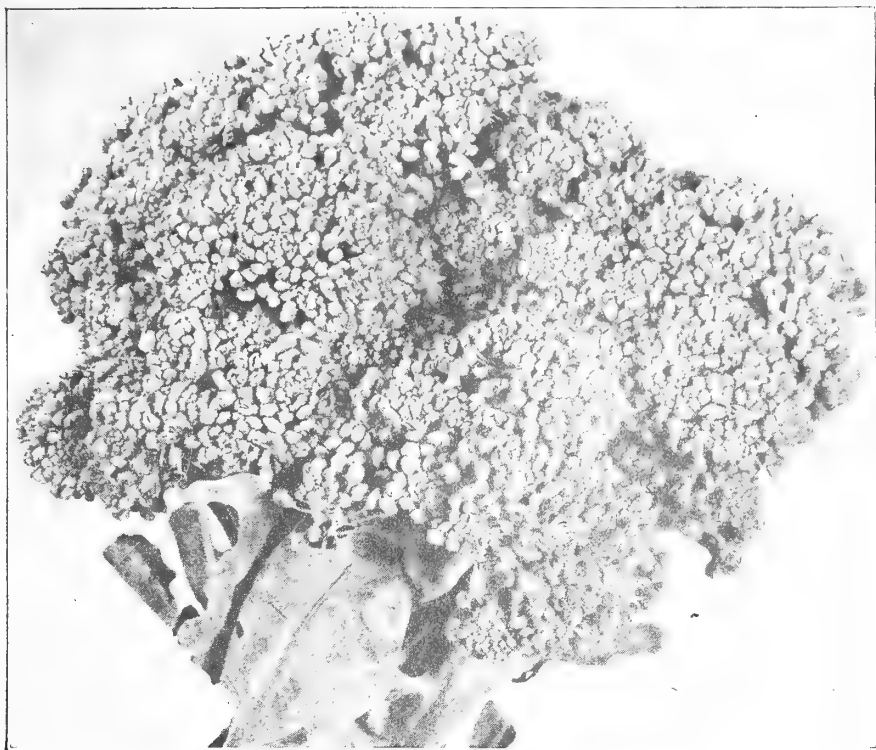

BROCCOLI

GREEN sprouting broccoli has been given new importance by the disclosure that because of its green coloring it is far richer in vitamins than white cauliflower, which it resembles in flavor. It is also a much easier subject for the amateur than cauliflower, and has a much longer season of harvest. It survives light frosts, and produces well in the cool autumn weather.

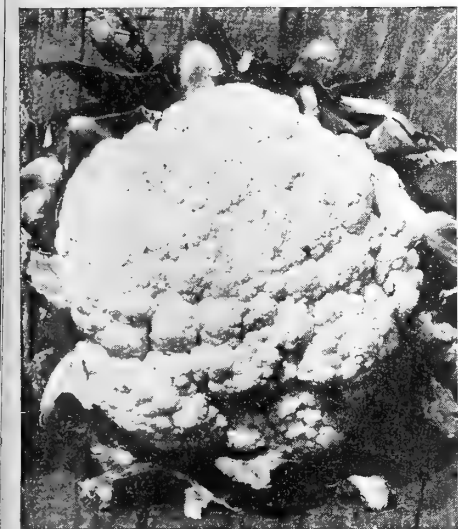

Sow outdoors with earliest crops; transplant or thin to stand 18 inches to 2 feet apart. Protect from aphids and cabbage worms. After center heads are cut, each branch will produce a head, harvest lasting until killing frosts.

Sow Slender, Tender

CARROTS

CARROTS have been improved in quality at the same time their value as a health food has been gaining wider recognition. In addition to color, size, shape, tops and season of maturity, our special strains are selected for sweetness, and the tenderness and even texture of the flesh, especially for a minimum of "core." Scientists say the brighter the color, the more Vitamin A in carrots.

Sow as soon as soil can be prepared, in shallow drills, 5 seeds to the inch. Thin cut when of finger size, and serve discards. Carrots will mature well growing close enough to touch, and remain delicious all season; but many prefer them young, and make several sowings.

Heartheart. See Novelty page.

Pkt., 25c; ½ oz., 45c; oz., .75; ¼ lb., \$2.00.

Touchon. 70 days. From the time it is finger size and thinned out of the row in early spring, until it reaches full growth in the autumn, this variety excels in flavor, tenderness even in yield, for home gardens. Its slender shape permits growing closer than thicker types, and decreases the core which all carrots have even though you may not see it. Its flesh is fine grained, sweet and has bright orange coloring. Pkt., 20c; ½ oz., 35c; oz., 60c; ¼ lb., \$1.50.

Red Heart (Red Core Chantenays). 70 days. It has no core of the usual sort, but its rich red coloring is even throughout the flesh. The top is ample for bunching and the foliage is fern-like. The root is of medium length, blunt, smooth and easily prepared for serving. Pkt., 10c; ½ oz., 25c; oz., 45c; ¼ lb., \$1.25.

Nantes Half-Long Scarlet. Matures in about 70 days. This early variety is not surpassed in tenderness and sweetness. The tops are small, the roots bright orange, smooth and cylindrical, 6 to 7 inches long. There is almost no core. Pkt., 15c; ½ oz., 25c; oz., 45c; ¼ lb., \$1.25.

Table Queen. Matures in about 70 days. Half-long type, rich red, tender, crisp and one of the sweetest we know. Pkt., 20c; ½ oz., 35c; oz., 60c; ¼ lb., \$1.50.

Green Celery Best for Vitamins

CELERY is often thought to be difficult to grow. Every home gardener whose soil is sufficiently light and rich to produce good Cabbages may easily produce a family supply of this most welcome delicacy. Start the seed indoors and set the plants out around the middle of June. Eight inches apart for the early kinds and a foot for the winter varieties. Do not work over the plants when they are wet with dew or rain.

Vaughan's Celery Seed is of the finest strains in the world and is used by market gardeners selling to the most exacting trade.

Quantity needed for 400 to 500 plants, 1 pkt.; 1000 plants, 1 oz.

Dwarf Strain. American-grown. Pkt., 10c; ½ oz., 50c; oz., 95c.

GOLDEN NUGGET

OUR CHOICE

GOLDEN PRIDE

SURPRISE

Hybrids for Heavy Yield

HYBRID sweet corn excels in three ways: Heavier yield, more even maturity, and resistance to Stewart's disease, and other troubles. In flavor, which many home gardeners consider the supreme point, the variety Our Choice is equal to Golden Bantam, some think better. Other hybrids will compare well in flavor with other open pollinated.

Any open pollinated corn will mature unevenly and give edible ears from one planting over a longer period, which some may prefer. Our list has been revised to offer the best of both hybrid and open pollinated types, as proved by exhaustive tests in our trials.

A packet plants 40 hills; a pound, 400 hills; 12 pounds, an acre.

Sow two weeks before frost proof date, seeds two inches deep, three inches apart; to be thinned out to six inches; or six seeds to a hill, 2 to 3 feet apart according to variety's height, thinning to three plants per hill. Time succession sowings, two weeks apart.

Golden Pride. 68 days. From Connecticut Experiment Station. Compared with Our Choice, it is longer by one inch, supplies more cut corn, is fully as fine a kernel and has as good or better quality. We recommend it. Pkt., 15c; 1/2 lb., 35c; lb., 60c; 2 lbs., \$1.10.

★**Vaughan's Golden Cross Bantam.** In about 79 days. Obtained by crossing the two strains produced by G. M. Smith of Purdue. It has the same resistance and will produce a heavier crop of more uniform ears. Pkt., 15c; 1/2 lb., 35c; lb., 60c; 2 lbs., \$1.10.

CUCUMBERS

Salad and Pickle

TWO distinct types of cucumbers are bred to fill the need for large fruits suitable for slicing to serve in salads, and the smaller, uniform, prolific, pickling varieties. Our special strains in both types are grown with the greatest care to insure that all standards of quality are maintained in your crop. **Quantity needed for 20 hills, 1 pkt.; 80 hills, 1 oz.**

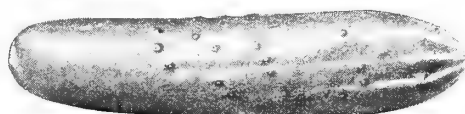

Home gardeners will have no trouble in producing from our strains fruits that excel in table quality. We recommend especially Mandarin, our new Chinese, earliest as well as of the highest quality, and the Vaughan, largest of outdoor varieties.

CUCUMBER MANDARIN. Pkt., 10c.

Earliest of All

GARDEN HUCKLEBERRY

This is a novelty, well described by the above name, which bears racemes or bunches of blackberries, ½ inch in diameter, which make excellent pies and preserves. To serve in pie or sauce, sweeten with syrup made of 1 part sugar to three parts water. As these berries lack acidity, add lemon juice or cook with sour apples, or rhubarb. The bushes are about 3 feet tall. Cultivation is the same as with the tomato, of which this plant is a distant cousin. Pkt., 15c; ½ oz., 50c; oz., 90c.

Best Home Garden

LETTUCE

TASTY bowl salads not only delight the palate, but when made with green leaves, are rich in Vitamin A and other dietary necessities. Home gardeners may plan their sowings so as to have bowl salad materials throughout the season. Besides lettuce, endive of both curly and broad-leaved types (Escarole) are excellent, as are rress and Finnocchio. Heading varieties of lettuce may not head easily in hot weather sections, but they grow rapidly and produce an abundance of leaves. Says Emile Foially, salad chef of the Hotel Sherman's famous College Inn, Chicago: "Leaf lettuce andomaine are far more tender and better flavored; and take the salad dressing perfectly, which is important. And the doctors say their green leaves have more vitamins. What a combination!" Quick growth is essential for all leaf crops. Quantity needed to sow: 30 ft., pkt.; 250 ft., 1 oz.

sow as soon as soil can be prepared, 1/2-inch drill, 5 seeds to an inch. Seed well, to make it grow fast. Thin out first to stand an inch apart; then use alternate plants until leaf varieties stand 8 inches, heading varieties 12 inches apart. Make succession sowings to prolong harvest.

Bred for Your Soil

ONIONS

PLANT breeders select for parents, specimens which do well in their breeding grounds. If bred in Illinois, the progeny of these plants will be resistant to Illinois hazards, and will have a liking for similar soil and climate.

Because of this we breed all our onions in Illinois, so we can know that our strains are adapted to the conditions of soil and weather which prevail in the great area lying east of the Rocky Mountains to the Atlantic Ocean, where our seed is chiefly grown. Liking for this environment is bred into our onion strains.

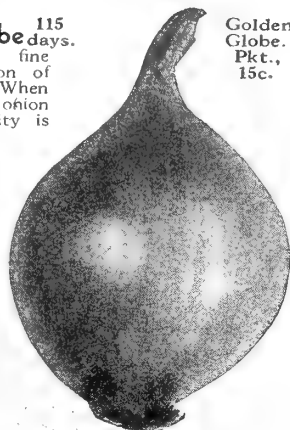

Quantity needed to sow: 25 ft., 1 pkt.; 125 ft., 1 oz.; acre, 6 lbs.

Sow with the earliest crops, in rich soil, in drills $\frac{1}{2}$ inch deep. Thin to 4 inches apart, using discards in green stage. Water when needed. Harvest after tops shrivel and dry in the sun, store in a dry place.

WINTER KEEPERS

★Golden Globe ¹¹⁵ days.

An exceptionally fine yellow globe onion of superior weight. When grown as a dry onion its keeping quality is superior, making it very desirable for the home and market gardener. Has a very deep globe, carrying its greatest diameter well up from the root. Has 3 skins for protection and from seed matures same time as Southport Globe. From sets it matures much earlier. It is a heavy yielder and a fine keeper. Pkt., 15c; $\frac{1}{2}$ oz., 30c; oz., 50c; $\frac{1}{4}$ lb., \$1.45.

Golden Globe. Pkt., 15c.

★Southport Yellow Globe. ^{Ball type. In} ^{about 110 days.} For growing on muck soil, this is the best keeping strain we have been able to develop in years of growing and selecting. This is the most uniform strain and will keep in storage longer than any other we know. It is preferred by large onion growers. Pkt., 15c; $\frac{1}{2}$ oz., 30c; oz., 50c; $\frac{1}{4}$ lb., \$1.45.

Southport Red Globe. About 110 days. A little deeper than Southport Yellow Globe, in color a rich dark red. A wonderful keeper with finely bred neck and a heavy yielder. Pkt., 15c; $\frac{1}{2}$ oz., 30c; oz., 50c; $\frac{1}{4}$ lb., \$1.45.

★Vaughan's Special Yellow Globe. ¹⁰⁰ days. ("MOUNTAIN" DANVERS.) Slightly smaller than Southport. When aphid damages the late onion crop it does not harm this variety, due to early maturity. Pkt., 15c; $\frac{1}{2}$ oz., 30c; oz., 50c; $\frac{1}{4}$ lb., \$1.45.

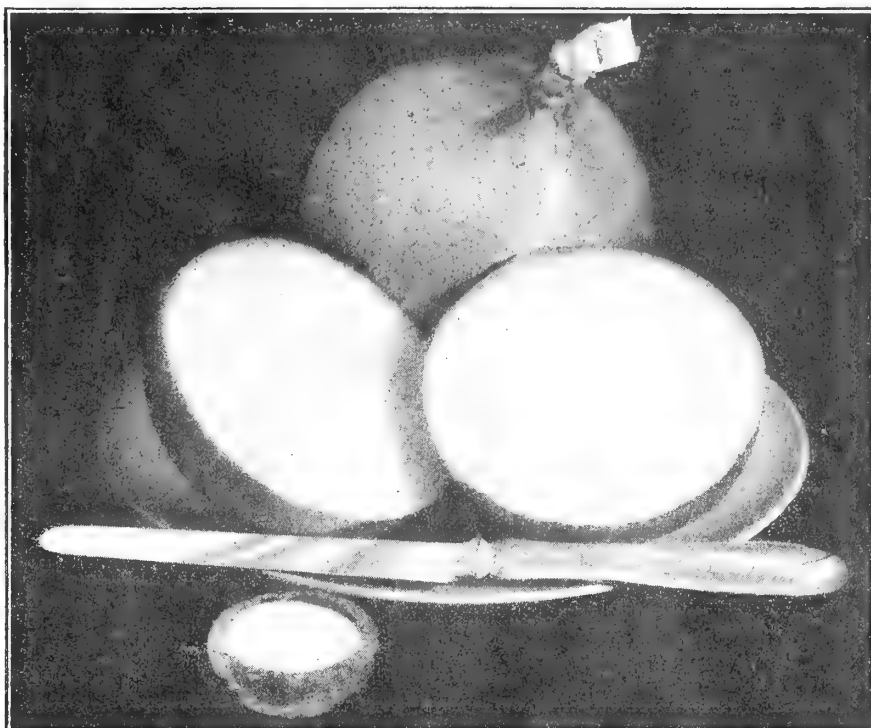

Large Red Wethersfield. About 100 days. An onion of very productive habit and a fine keeper. The skin is deep purplish red, which covers a round, somewhat flattened bulb of purplish white flesh. Moderately fine grain and mild flavor. In poor soil it does best, growing a thinner neck than in strong soil. It is standard in its class in the south and southwest. Pkt., 15c; $\frac{1}{2}$ oz., 30c; oz., 50c; $\frac{1}{4}$ lb., \$1.45.

Fancy Yellow Globe Danvers. About 110 days. This is early, almost true globe-shaped, beautiful yellow skin, pure white flesh, of very fine quality. It has a good size, and a fine thin neck. Vaughan's strain is so near to globe shape that it passes for globe on the market. The crop ripens uniformly at one time, and its keeping quality is excellent. Pkt., 15c; $\frac{1}{2}$ oz., 30c; oz., 50c; $\frac{1}{4}$ lb., \$1.45.

Brigham Yellow Globe Onion. 110 days. A strain of Southport Yellow Globe. While not as uniform in shape, it is among the best in production and keeping qualities. It may be grown successfully on either muck or heavy soil. Pkt., 15c; $\frac{1}{2}$ oz., 30c; oz., 50c; $\frac{1}{4}$ lb., \$1.45.

Ohio Yellow Globe. In 110 days. Of uniform shape, beautiful color and fine size, it out-classes the old type Yellow Globe Danvers. Its finely bred neck, large size, solid flesh of mild sweet quality, uniform growth, heavy yielding and superb keeping quality have made it a favorite. Pkt., 15c; $\frac{1}{2}$ oz., 30c; oz., 50c; $\frac{1}{4}$ lb., \$1.45.

Vaughan's Ideal White Globe. About 110 days. A strikingly handsome onion: very early, ripens evenly and is a fine keeper; the small, high-bred neck tells the story of quality; it is a true globe, pure white. Pkt., 15c; $\frac{1}{2}$ oz., 30c; oz., 50c; $\frac{1}{4}$ lb., \$2.00.

VALENCIA SWEET SPANISH ONION, WHITE. Pkt., 15c.

PEAS

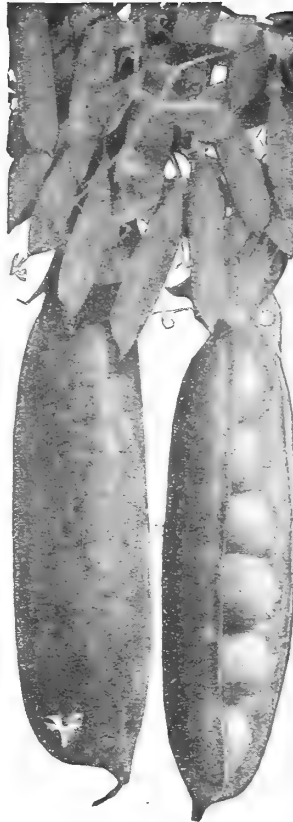

For a Long, Quality Harvest

LITTLE MARVEL

LAXTON'S PROGRESS

GIANT STRIDE

PEAS are rich in sugar, which begins to turn to starch when they are picked; thus home gardeners alone can enjoy this crop at its best.

Where hot dry summer weather cuts short the crop, the problem is to get the heavy yield, large size and sugar content of the late sorts into early yielding varieties which will bear a crop before the summer's drought arrives. Our strains are selected for these qualities. Quantity needed for 100 ft., 1 lb.

Sow smooth seeded with earliest crops, wrinkled peas two weeks before frost proof date. Sow 2 inches deep, two inches apart in row, or in twin rows, 6 inches apart, with support between. Crop must mature before hot weather.

DWARF

★**Little Marvel.** 64 days. The most satisfactory pea in the average home garden. The big point in its favor is that it remains in prime picking condition a week longer than the older sorts. Very productive, hardy, luscious and sugary. Vines 18 inches, pod dark green, well filled. Pkt., 10c; ½ lb., 25c; lb., 40c; 2 lbs., 75c.

★**Giant Stride.** 74 days. Pea blight is a wilt affecting peas when they are planted too often in the same ground. You will find the new Pea Giant Stride nearly 100% resistant, as well as of top quality and a heavy yielder. It makes a vine 16 to 18 inches tall, dark green, with pods longer than Laxton's Progress and better filled with peas of excellent flavor. Pkt., 10c; ½ lb., 25c; lb., 40c; 2 lbs., 75c.

★**Early Gilbo.** 72 days. A new pea from one of our oldest pea growers. Rogers Brothers have perfected what they consider one of their best market garden varieties and have named it after one of their oldest breeders. Vine 24-28 inches tall, very dark and heavy. Pod 4½-5 inches long by ½ to ¾ inch wide, of the Dwarf Alderman type. Season 69 days. Pkt., 10c; ½ lb., 25c; lb., 40c; 2 lbs., 75c.

★**Nott's Excelsior.** In 62 days. Almost as early as the round seeded varieties, but far superior to them in quality. Vines about 15 inches high, pods about 3 inches long, each containing 5 to 7 peas of good size, tender and delicious. Pkt., 10c; ½ lb., 25c; lb., 40c; 2 lbs., 75c.

★**Century of Progress.** Matures in about 76 days. This is a vigorous growing, heavy yielding variety which bears large, wrinkled peas of the very highest table quality in greater profusion than other varieties of equal quality. It grows 20 inches tall, with heavy foliage of a dark green, and dark green pods 4½ inches long. It is an excellent home garden variety. Pkt., 10c; ½ lb., 25c; lb., 40c; 2 lbs., 75c.

★**Laxton's Progress.** 62 days. The earliest and by far the best of the large-podded, large-fruited wrinkled peas. Of all the varieties producing peas of equal quality, this is the heaviest yielding. It bears long pods, averaging one more pea to the pod than Hundredfold. Pkt., 10c; ½ lb., 25c; lb., 40c; 2 lbs., 75c.

★**Hundredfold.** About 62 days. This is another of Vaughan's Specials that has proved itself a winner for gardeners. It is extra early, has large pods like "Telephone," which are filled with the finest flavored peas. Hundredfold is in season a few days later than the first earlies. It excels in size, appearance and productiveness. Pkt., 10c; ½ lb., 25c; lb., 40c; 2 lbs., 75c.

★**Premium Gem.** 64 days. An extra early old type garden pea that could well be replaced by Nott's Excelsior or Little Marvel, as they are superior. Pkt., 10c; ½ lb., 25c; lb., 40c; 2 lbs., 75c.

★**Dwarf Telephone or Daisy.** About 76 days. A mid-season maturing sort of merit; vines are dwarf and bear large, bright green pods, each containing 7 to 9 peas of finest quality. This is a splendid variety, of which we offer a high-class re-selected stock. Pkt., 10c; ½ lb., 25c; lb., 40c; 2 lbs., 75c.

★**American Wonder.** 61 days. Among the oldest of the home garden peas it is being superseded by Nott's Excelsior and Little Marvel. Pkt., 10c; ½ lb., 25c; lb., 40c; 2 lbs., 75c.

★**Dwarf Defiance or Stratagem.** About 79 days. Pea growers cannot afford to overlook this splendid main crop success; it is without a superior, a grand second early. The vines are vigorous, the pods dark green and immense in size and fullness, like "Telephone." The handsome pods are filled with peas that are sweet and rich flavored. Pkt., 10c; ½ lb., 25c; lb., 40c; 2 lbs., 75c.

GIANT STRIDE—Dwarf, Main Crop
DWARF DEFIANC—Dwarf, Late

Tall Peas

THE gardener who takes pride in his peas and whose space is unlimited will find the tall-growing sorts unequalled for length of season, heavy yielding and high quality. Support should be given and they should be planted with plenty of room. Liberal fertilizing will be well repaid.

★**Vaughan's Improved Telephone.** 74 days. Of the tall-growing varieties of late peas, "Vaughan's Improved Telephone" is regarded by experienced and successful growers as the best sort for general purposes. Uniformly large pods, 5 inches or more long, filled with 8 to 9 delicious peas. Grows 4 feet high; is a main crop variety, and a heavy yielder. Pkt., 10c; ½ lb., 25c; lb., 40c; 2 lbs., 75c.

★**Everbearing.** About 74 days. For late summer and autumn; very prolific variety. Pod about 3 inches long, with large peas of good quality. Pkt., 10c; ½ lb., 25c; lb., 40c; 2 lbs., 75c; 5 lbs., \$1.25.

EDIBLE POD PEAS

(Cooked like String Beans)

★**Dwarf Gray Sugar.** About 65 days. Vines 16 inches. Pkt., 10c; lb., 45c; 2 lbs., 85c.

MEDIUM HEIGHT

A HEAVIER yield without sacrificing quality is obtained from the varieties of peas which require some support. The varieties listed below grow to three feet high and should be given support of chicken wire or brush between companion rows. The smooth podded sorts may be sown first, and if not allowed to mature too much, will be found to be of good table quality.

World's Record or Improved Gradus.

60 days. Gradus is the greatest of the wrinkled peas; it is large, early, and in flavor equal to the best wrinkled kinds. It is tender and should be planted in the warmest spot in the garden. Vines 30 inches, pods 4 inches long, beautiful green color, with 7 to 10 or more rich, tender peas in each. Pkt., 10c; ½ lb., 25c; lb., 40c; 2 lbs., 75c.

★**Thomas Laxton.** About 62 days. This is a selection of Gradus. The season is identical, but the pods are square at the end and deeper green. Vines are 3 to 3½ feet high. A better yielder than Gradus. Pkt., 10c; ½ lb., 25c; lb., 45c; 2 lbs., 80c.

★**Alaska—Called Earliest of All.** In about 57 days. Alaska and "Maud S." are in all but color the same; Alaska seed is bluish in color; it is standard for market and canning. Pkt., 10c; lb., 35c; 2 lbs., 65c.

To Plan Home Vegetable Garden

TO AVOID waste, save money and work, and reap the greatest harvest possible from your Victory Garden:

- 1—Grow vegetables your family likes, in quantities which you can use.
- 2—Provide a continuous harvest through the garden season in your locality, with a substantial surplus for winter canning.
- 3—Place emphasis on the protective foods, rich in vitamins, which are especially needed under a rationed diet to avoid malnutrition.

Plan for All Season Harvest

Many vegetables have a short harvest period. Your sowings of these must be divided into two, three or more plantings, so spread the harvest throughout the season.

Below we give the approximate time that one sowing will remain in top condition after harvest begins. Plan your second sowing so that when this period is ended, a succession crop will be ready.

Crop	Harvest Lasts
Beans	4 weeks
Beets	6 weeks
Carrots	8 weeks
Cucumbers	4 weeks
Endive	6 weeks
Lettuce	6 weeks
Kohlrabi	3 weeks
Turnips	2 weeks
Spinach	2 weeks
Sweet Corn	10 days
Onion Sets	4 weeks
Peas	2 weeks
Radish, early	1 week
Radish, midseason	2 weeks
Radish, winter	6 weeks

Produce Without Waste

Grow the vegetables your family will eat and put up for winter, and no more. Below shows the space in a garden row which should produce one serving for a family of four. Estimate the number of times each week you would like each vegetable to appear on your table, then plant to produce all needs.

Snap Beans	1 ft.	Kohlrabi	2 ft.
Lima Beans	2 ft.	Leeks	2 ft.
Beets	1 ft.	Lettuce, Leaf	1 ft.
Broccoli	1 ft.	Spring Onions	1 ft.

Sprouts	1 ft.	Parsnips	2 ft.
Cabbage	2 ft.	Peas	3 ft.

RADISH

Sow Early and Often

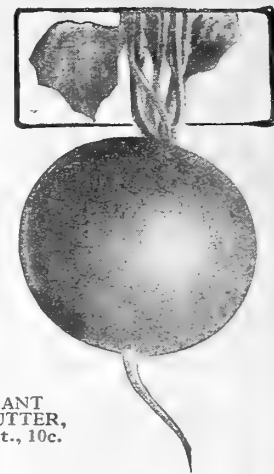

EARLY SCARLET GLOBE SELECT

IMPROVED FRENCH BREAKFAST

SCARLET TURNIP WHITE TIP.

GIANT BUTTER, Pkt., 10c.

ICICLE, Pkt., 10c.

In home gardens, the second early varieties Giant Butter and Icicle are favorites. They are large enough to use as quickly as early types, but give twice as long a harvest before they begin to turn pithy.

RADISHES from April to December are possible for the home gardener who sows early, midseason, summer and winter types.

Radishes supply, in a 2 oz., portion, 61 U of Vitamin B₁, 11 milligrams of Vitamin C, 0.01 milligram of Vitamin B₂. Sow them thinly with slow germinating seeds such as carrots, parsnips, and parsley and harvest the radishes before the companion crop begins to mature. Make frequent sowings of the early types a week's supply at weekly intervals.

Our strains are grown with the greatest care, which involves considerably increased cost, but the additional cost is small compared with the great difference in your crop.

Quick growth is the secret of success. A rich, light soil is required. The globe and olive varieties grow faster than the long type, and turn pithy sooner. The long types grow more slowly and are slower to turn pithy, so they endure heat better. Winter radishes should be sown in June or later and allowed to develop in the cool, moist fall weather. Quantity needed for 15 to 20 ft., 1 pkt.; 75 ft., 1 oz.

Sow with earliest crops, ½-in. drill, 5 seeds to the in. Sow early types one week's supply at a time, at weekly intervals. Mix with parsnips, parsley and carrots, to mark the row. Harvest when large enough to eat. Summer and winter types have longer harvest.

Medium Top—Pkt., 10c; oz., 20c; ¼ lb., 45c; lb., \$1.25.

★**Scarlet Turnip White Tip.** 26 days. Vaughan's Selected Stock. This radish is a table dainty, crisp, tender and sweet; it is turnip-shaped, bright scarlet color with white tip, and is a high-class strain for outdoor planting. It combines beautiful appearance with finest radish quality—appealing to the eye and palate.

Vaughan's "Sparkler" Strain for Open Ground. Pkt., 10c; oz., 20c; ¼ lb., 45c; lb., \$1.25.

Saxa. (F.) 20 days. This is a European variety which has become very popular in the United States. It is one of the very earliest radishes and slow to run to seed. The tops are very small, the radishes are round and bright scarlet. We recommend it for the first planting in the garden, and also for forcing in hotbed and greenhouse. Pkt., 10c; oz., 20c; ¼ lb., 45c; 1 lb., \$1.25.

★**Giant Butter.** 28 days. By far the largest of the early turnip radishes. In rich soil it will produce crisp, spicy, tender roots of perfect globe shape two inches in diameter, only a week later than the smaller globe types. It is usable for a much longer season before it begins to turn pithy, and by planting a succession of crops it can be enjoyed throughout the summer. It is seldom found in the market and will make your friends talk. Pkt., 10c; oz., 20c; ¼ lb., 50c.

White Box—(Early White Turnip). 20 days. Our earliest white radish. Turnip-shaped, short top and a rapid grower—crisp. Pkt., 10c; oz., 25c; ¼ lb., 60c.

While this is not a member of the Spinach family proper, it furnishes an abundance of delightful "greens" throughout the summer and right up to cold weather. Both the leaves and the stalks of the plant are very fleshy and extremely brittle and of the finest quality when cooked. Sow as soon as the garden is prepared in rows 3 feet apart and thin the plants to stand 2 feet apart in the rows. Soak the seed before sowing. Pkt., 10c; oz., 35c; ¼ lb., \$1.00.

TAMPALA

A Chinese plant used for greens which grows and bears all summer. Pkt., 15c; 2 for 25c.

SPINACH—KING OF DENMARK. Pkt., 10c.

Spinach

SPINACH delights in cool, moist weather. Seed should be sown at the earliest possible moment in spring in rows one foot apart and thinned to six inches in the row. It matures in 45 to 50 days and quickly runs to seed in warm weather. The Antvorskov variety, listed below, is most free from this tendency. Home gardeners have generally adopted Swiss Chard and New Zealand Spinach as a greens crop, as both may be cut many times and will produce a continuous crop until freezing weather in the fall. A fall crop of spinach may be sown in late July or August and will find the cool, moist autumn weather favorable for growth. The value of spinach in the diet has been scientifically established by the vitamin investigation.

★ **Nobel Giant Thick Leaved.** 45 days. The seed of this thick-leaved variety produces the largest spinach under cultivation. It grows rapidly and remains in good condition a long time. The medium-green leaves are large, rounded, slightly crumpled, succulent and tender. It is an excellent home garden spinach. Pkt., 10c; oz., 20c; ¼ lb., 50c.

King of Denmark (Antvorskov). 48 days. has been slower to run to seed than any other sort. Antvorskov forms quite large tufts (or rosettes), compact and low. The numerous leaves are extra large, broad and rounded, exceedingly bushy, slightly crumpled and of a glossy dark green color. Pkt., 10c; oz., 25c; ¼ lb., 65c.

Bloomsdale Long Standing. 45 days. Latest of the Long Standing Spinach introductions. Improvement was accomplished through the selection of hermaphrodite plants (bisexual), which run to seed much more slowly than the unisexual. This variety is of better quality than the Antvorskov (King of Denmark), having larger, Savoy type leaves. Pkt., 10c; oz., 20c; ¼ lb., 50c.

Bloomsdale Dark Green. 43 days. The leaf is savoyed, or crinkled, and of a darker green than Bloomsdale Long Standing. The dark color is preferred in some markets. Pkt., 10c; oz., 20c; ¼ lb., 50c.

KEEPING CUT DAHLIAS

After cutting, strip the foliage except at the top; recut the stem and immerse in water as hot as the hand can bear, being sure that none of the foliage gets in the water. When the water cools the Dahlias are transferred to a pail of cold water and left in the cellar overnight. We have found that they keep several days and increase in size.

RESURRECTION LILY

(Lycoris Squamigera) For Outdoor Planting

Amaryllis Hallii. Produces in early spring attractive green foliage which grows until May, when it ripens off and disappears, and one not familiar with its habits would think the bulb had died, but about a month later, as if by magic, the flower stalks spring from the ground to a height of two or three feet, developing an umbel of large and beautiful lily-shaped flowers three to four inches across and from eight to twelve in number, of a delicate lilac-pink shaded with clear blue.

Culture—The bulb is perfectly hardy without any protection. The proper time to plant is in the summer when the bulb is dormant. Cover the crown about four inches. Each, 85c; doz., \$8.50.

LYCORIS

Radiata. A coral red Spider Lily. Bulbs planted 5 inches deep July 15th, bloomed September 4th. This is not hardy, but has been known to survive freezing in pots. It sends up foliage in March. VAUGHAN'S BONE MEAL

This is a special brand we have put up for our trade. It is ground fine, hence acts quickly. Free from acid, and a superb article. It is made from bone accumulated in large slaughter houses, and should not be compared with the Bone Meal made from cattle heads and feet gathered upon the western prairies. Our Bone Meal has been slightly steamed to soften it and is thus quicker in its action. Analysis: Nitrogen, 2 percent; total phosphoric acid, 22 percent. Ceiling prices, 5 lbs., 50c; 10 lbs., 95c; 25 lbs., \$1.50; 50 lbs., \$2.50; 100 lbs., \$4.10; 500 lbs., \$18.50.

VAUGHAN'S SHEEP MANURE

This is a pure, natural manure, and its effect is immediate; it is excellent for mixing with the soil for greenhouse plants—one part manure and six parts soil. Strewn over and dug into the vegetable garden or placed directly in drills or hills, it promotes a rapid, steady growth until maturity. It makes the richest, safest and quickest liquid manure. For use in liquid form, one pound to five gallons of water will make a liquid which can be used with safety daily if necessary. 5 lbs., 40c; 10 lbs., 75c; 25 lbs., \$1.35; 50 lbs., \$1.95; 100 lbs., \$2.75; 500 lbs., \$12.00.

Shredded Cattle Manure. Manufactured by special process from selected fresh cleanings from cattle pens. There is no offensive odor, and when spread on lawn and garden it works down into the soil so that there is no refuse to blow about or be raked off when the growing season begins. 25 lbs., \$1.35; 50 lbs., \$2.40; 100 lbs., \$3.25; 500 lbs., \$12.50; 1,000 lbs., \$24.00.

Adco Artificial Stable Manure. Make it yourself, in your own garden. Vaughan's Lawn and Garden Fertilizer (4-12-2)

This mixture is composed of plant foods in mineral form. The advantages of mineral fertilizer include the absence of objectionable odor and the quality of being more readily soluble, which makes it more quickly effective upon plant growth. This is an excellent mixture for regular use in the garden plot in small quantities to insure vigorous growth.

For a new lawn, broadcast evenly 30 to 40 lbs. per 1,000 square feet. New Chemical Marvels

Rid Garden of Weeds and Pests

Dandykill Exterminates Lawn Weeds Leaving Blue Grass Unhurt

GIANT THISTLE IS THOROUGHLY SPRAYED WITH DANDYKILL

in water, making it easier to prepare and use, and to clean from your spray equipment after use.

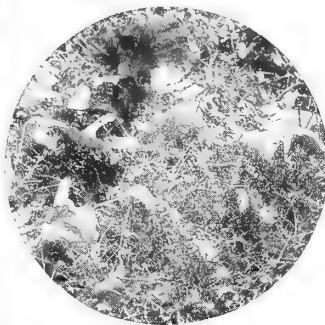

The growth regulating chemical (hormone) 2, 4 dichlorophenoxyacetic acid, commonly known as 2,4D, is used in varying forms and strengths for horticultural purposes, and has been proved to act as a selective weed killer when sprayed in the proper strength on plants to be destroyed.

Extensive experiments made last summer established the fact that when used correctly, this chemical is harmless to blue grass and red top, which are usually combined in lawn mixtures, and also to fescues. It is not effective against crab grass and may injure bent grasses. It retards the growth of white clover and often kills it.

Tests made in many parts of the country have proved this chemical to be fatal to the following weeds found in lawns: Buttercup, chaerophyllum, chickweed, cinquefoil, cress, dandelion, dichondra, dock, fleabane, gill-over-the-ground, heal-all, henbit, knotweed, lespechea, lippia, moneywort, mustard, onion, pennywort, pepper-grass, both broad and narrow leaf plantain, pussy-toes, shepherd's purse, speedwell, thistle, veronica and whitlow.

In general it may be said that it rids the average lawn of most weeds, without injuring blue grass, in fact many reports say that following its use blue grass improves in color and vigor.

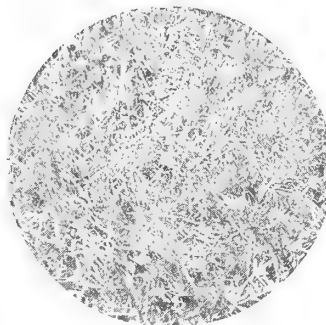

Bent grass is not always injured but if sprayed when in full growth its leaves may be killed, though new growth in from two to four weeks is probable.

LAWN BEFORE SPRAYING

Dandykill is a form of the remarkable weed killer 2, 4D, which in our judgment is best suited for use by amateurs with ordinary spray equipment, because:

It is the most economical, a powder rather than liquid, which saves shipping weight, and completely soluble

LAWN TWO WEEKS LATER

Time To Apply—U. S. Government scientists recommend that weeds be sprayed when vigorous early growth is well established, dandelions just before they flower. When treated, they say, weeds die because their food reserves are used or burned up. Thick roots of dandelions become soft in three weeks, and under warm, moist conditions the whole plant, roots and all, disintegrates entirely in about two months.

Visible Effects on Weeds. Leaves curl up, then turn yellow, and finally die. First effects are apparent in from 24 hours to 6 days after spraying, and lawn weeds usually disappear in two to three weeks.

Danger in Use. Greatest care must be taken to prevent Dandykill spray from touching desirable plants, which may be killed or deformed as a result. Especially important is it that sprayer equipment be thoroughly cleaned after using for 2,4D, lest some trace remain to mix with other spray materials, and injure plants sprayed with it. Being soluble in water, Dandykill is more easily cleaned from spray equipment than are the forms of 2,4D which are dissolved in oil or wax. Nevertheless care must be taken to insure that no remnant of 2,4D remains in the form of liquid, or deposit on the walls, before the equipment is used for another purpose. Wash with soap suds and rinse with hot water several times.

Kills Weeds Not Found in Lawns. Dandykill is fatal to weeds not found in lawns including poison ivy, bindweed, sumac, sheep sorrel, thistle and many others.

How to Apply. It is best applied in a fine spray, at the strength recommended on the package, thoroughly wetting the plants to be destroyed. Directions for using it with a dry carrier are supplied with each package.

For suitable sprayers, see page 92.

Dandykill: Ceiling prices, 2 ounces (will treat 800 square feet) prepaid, 55c. 6 ounces (will treat 2,500 square feet) prepaid, \$1. 24 ounces (will treat 10,000 square feet) prepaid, \$3. 6 pounds (will treat 40,000 square feet) \$10.00, by express, charges collect.

FOUR WEEKS LATER THISTLE IS DEAD TO THE ROOT TIPS

Use Protexall for Most Insects and Diseases

A one-shot spray or dust that protects plants from most insects, fungi and bacteria. From a single package, this post-war formula enables you to apply to both food and ornamental plants in one all-inclusive operation the four most effective materials for combatting plant pests which war-time invention and world-wide tests have approved:

D. D. T., the marvelous insecticide developed by war experience which kills most garden insects, except some aphids, bean beetles, and red spiders.

Rotenone, most effective of the pre-war materials, non-poisonous to animals, but fatal to aphids, bean beetles, and all others which may be unharmed by D. D. T.

Fermate, greatest discovery in fungicides, hitherto unobtainable for gardens, harmless to all plants, and giving complete protection from many pests which resist other materials.

Sulphur, safest and most effective pre-war fungicide, which deals with most troubles which fermate does not.

With this one preparation the amateur gardener can be sure of applying the most effective modern remedy to every case of insect or disease injury which may threaten his garden, whether he grows flowers or food.

To give equal protection, with separate sprays or dusts, it would be necessary for him to keep in stock a contact insecticide, a stomach poison, and at least two remedies for fungi and bacteria. To use these separate materials effectively, he would be obliged to diagnose the trouble which was threatening his plants, and select the correct materials to deal with it, otherwise his effort might be in vain. Even experienced gardeners are often unable to diagnose garden trouble; sometimes there is doubt whether an injury is due to insects or disease. The need for a combined spray and dust has been felt for generations, and many attempts have been made to provide it. With pre-war materials it was difficult to find a

combination which would be fatal to all pests, yet harmless to all plants, which would combine without loss of effectiveness by any constituent and keep in combination without deterioration.

These difficulties have disappeared with the development of Fermate and D.D.T., which became known during the war, and will be made available for general garden use this year for the first time. These materials have such marvelous scope that their limitations are not yet fully known. D.D.T. controls most chewing insects, and many juice drinkers which defy pre-war materials, such as leaf hoppers and flea beetles, and European corn borer. It destroys with amazing effectiveness Japanese beetles, cabbage worms, most caterpillars and beetles, but not the Mexican bean beetle, and some plant aphids but not all. Rotenone, however, will exterminate those against which D.D.T. is ineffective.

Fermate has been chiefly used so far in greenhouse and garden experiments where it has proved harmless to the most delicate plants, and a reliable specific for black spot on roses, leaf spot on chrysanthemums, snapdragon rust, most scale insects, anthracnose of tomatoes and brown rot of cherries. If there are forms of fungi and bacteria which fermate will not touch, then sulphur is added to take care of them. Sulphur used in Protexall is in a form which will not injure any garden plant.

Protexall is prepared in two forms, one for use as a spray, and one for use as a dust. The proportion of each material used in Protexall is scientifically correct, in order to insure maximum effect. Protexall spray is a powder which mixes easily with water. Protexall Dust comes mixed with a spreader and is ready for instant use. It is necessary to order the form you prefer and have the equipment to use, since the spray material does not make an efficient dust, and the dust is prepared with an inert filler, and cannot be used as a spray.

Protexall Spray, 1 oz., 35c, prepaid 40c; 4 oz., \$1.00 prepaid \$1.10; 1 lb., \$3.00 prepaid; 5 lbs., \$12.00 F. O. B. Chicago or New York.

D. D. T. and Other New Chemical Garden Aids

D.D.T. is the outstanding new material of universal value; every gardener will need one or more of its various forms. It controls most chewing insects and many juice drinkers which defy prewar materials, such as leaf hoppers, flea beetles, European corn borers and the gladiolus thrips. It kills Japanese beetles, cabbage worms, leaf rollers, most caterpillars and beetles, but not the Mexican Bean beetle; and some plant aphids but not all. For flies, mosquitoes and all household pests, it is unrivaled. Forms for all uses are listed below.

D. D. T. 40% Wettable Dust. For diluting in water for spraying, or mixing with talc to prepare dust of desired strength. One pound in 100 gallons of water makes effective garden spray leaving a heavy residual deposit on plants. Three pounds to 100 gallons of water makes effective and safe spray for cattle, horses, hogs and other farm animals, or residual spray for walls of barns, stables, hog or poultry houses and milk sheds. 8 oz., postpaid, \$1; 1 lb., postpaid, \$1.35; 5 lbs., \$4.95, prepaid for \$5.25.

D. D. T. 30% Liquid Spray. D. D. T. in emulsion form has given results on some insects superior to those from wettable powders. This is safe to use on garden and greenhouse plants, also for spraying barns and other buildings to control flies. Eight ounces will make 25 gallons of garden spray. 8 oz., \$1.50, prepaid \$1.60; 1 gallon (makes 400 gallons of garden spray) \$15.00, shipped by express, charges collect.

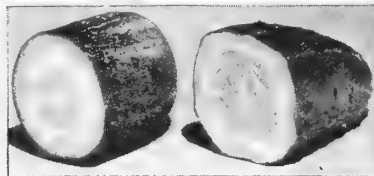

D. D. T. 5% Dust. A ready-mixed garden dust of D. D. T. combined with a fine, light-weight filler, safe to use on all plants in gardens and greenhouses, also on livestock, dogs, pet animals (except cats) and poultry. Its extra strength assures maximum pest control. 1 lb. 35c; postpaid, 45c; 5 lbs., \$1.25, postpaid, \$1.50; 25 lbs., \$4.50, shipped by express charges collect.

D. D. T. Aerosol Bomb. When released from the bomb in five to seven seconds, non-poisonous Freon gas impregnated with 3% D. D. T. and 2% pyrethrum, both deadly to insects, completely fills a room, killing insect life and leaving a deadly deposit which will protect from pests for weeks. Moths, mosquitoes, roaches, flies and other household pests are exterminated. Safe to use and harmless to clothing and furniture. One bomb will last the average household months. Aerosol bomb, contents 16 oz., \$3.00, postpaid \$3.25.

Water Lilies

AS the principal feature of interest in the small garden, a pool answers admirably. It can be made to harmonize with either natural or formal styles and fits well into most designs. It will furnish a home for gold fish, and other aquatic animal life, while the bog plants and water lilies which can be grown in it have both beauty and strangeness to attract all. Garden makers are learning how easy it is to grow water plants and how richly they reward them.

Seed and Bulb Orders: Write quantities distinctly in the column provided and attach prices.

Plant and Tree Orders: State quantity, size or age of each variety, with prices attached.

C. O. D. Remittance: Please remit by money order or certified check. Do not send currency unless registered.

Mistakes: If there is any error in filling your order, write us at once returning your order if a paid order or your invoice if a charge order, for quick investigation.

Express Shipments: General orders for garden seeds with heavy weights of corn, beans, fertilizers, etc., should go by express, freight, or truck, also all shipments containing breakables. Orders over 5 lbs. going to 5th Zone travel cheaper by express than parcel post.
